Introduction

FinSight is a financial transaction tracking web application designed to help users monitor their spending and detect suspicious activities.

The system allows users to:

- Track and analyze income and expenses
- Detect fraudulent transactions
- Identify recurring subscription payments

Problem Statement

Many users face several problems when managing their finances:

1. Lack of visibility into transactions
2. Difficulty detecting suspicious or fraudulent activity
3. Limited ability to analyse spending patterns
4. Recurring subscriptions often go unnoticed

FINSIGHT

FUNCTIONALITIES

TRANSACTION MANAGEMENT

Add transactions manually

Categorize & filter transactions

View transaction history

View fraud scores for each transaction

FRAUD DETECTION & ALERT

Transaction receives a fraud score 0-100

Fraud scoring rules:

- Unusually high transaction amount
- Rapid transactions in a short time
- Transactions from different locations
- Unusual category

DASHBOARD ANALYTICS

Dashboard provides:

- Total income & expenses
- Current balance
- Fraud incident count
- Spending by category

This helps users understand their financial behaviour.

SUBSCRIPTION DETECTION

Automatically detects recurring payments.

Predicts the next payment date

Alerts users when a payment is due soon.

FINSIGHT

TESTIING

Example test cases

Test Case	***Description***	***Expected Result***
Create Transaction	User adds a new transaction	Transaction saved successfully
Fraud Detection	High-risk transaction entered	Fraud alert generated
Filter Transactions	User filters by category	Only matching transactions displayed
Subscription Detection	Recurring payments exist	Subscription detected
Resolve Fraud Alert	User resolves alert	Alert status updated
